Claim Objections

Claim 6 is objected to because of the following informalities: in claim 6, line 5, it is suggested to change "parameter" to - parameters- ; it is also suggested to terminate line 6 (after value) with a semi-colon (--;- -). Appropriate correction is required.

Claim Rejections - 35 USC § 112

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 depends on claim 1 and there is no clear indication a "driver" has been established to support antecedent basis.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 - 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 1 recites "...regulating vehicle handling of one of an all-wheel drive vehicle...and a single axle drive vehicle". However, at lines 9 – 10 claim 1 recites

Art Unit: 3661

"...increasing coupling between a front axle and a rear axle of the vehicle." First of all, since the claim calls for *regulating vehicle handling of EITHER an all-wheel drive vehicle...and a single axle drive vehicle*, if the skilled artisan considered the *single axle drive vehicle*, the skilled would not know as to how to make or use the invention because the skilled artisan would have readily understood that the single axle drive vehicle would NOT include both a front axle and a rear axle. Second (applicable to both claim 1 and claim 6), it is not readily understood whether or not the regulating vehicle handling is accomplished as claimed. Are Applicants considering regulating vehicle handling to only include increasing of yaw damping and locking torque of the [main-axle] lateral?

Any claims linked to claim 1 and claim 6 are necessarily rejected.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents Nos. 5,225,984 and 5,262,950 teach related torque distribution control apparatus for a four-wheel drive vehicle.
